

Code Pairing Interview

AI Engineer

About the interview

1. Deepening understanding

It is a coding interview, designed to get a deeper understanding of your knowledge and skills, as well as give you the opportunity to learn more about us through a Zoom collaboration session.

1. Quality focus

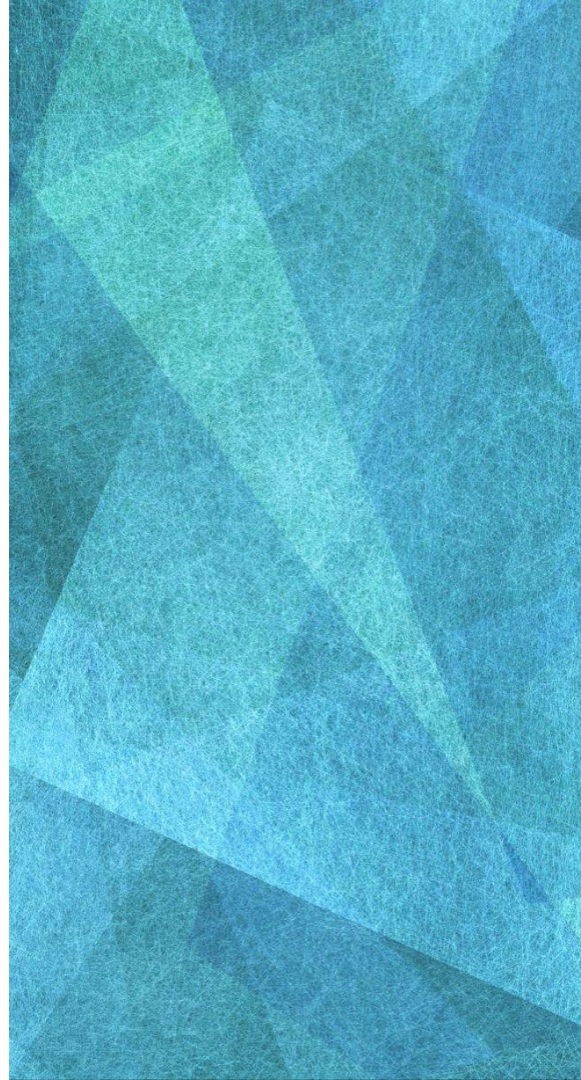

We value software quality. Be ready to demonstrate techniques like boundary value analysis and equivalence partitioning for coverage. We'll also look at your approach to exploratory testing, cross-functional requirements (security/performance), and your understanding of testing across different software layers.

1. Outcome-driven collaboration

Collaborate with your interviewer to achieve the outcomes discussed at the start of the interview. Engage in technical discussions to solve problems effectively and understand design, components, and refactoring opportunities.

1. Real-project simulation

Experience our work style by participating in a simulated client project you and your pair are working on. Develop a user story based on a provided codebase URL, offering a glimpse into life at Thoughtworks.

Your Code Pairing interview

Please get familiar with the codebase and problem statement **before** the interview. You should go to the [Thoughtworks GitHub repositories](#) . Make sure the code is running on your laptop.

Important: Please avoid writing any code in advance; the goal is simply to explore and understand the codebase before the interview.

1.

Go through the problem statement and code repo, including the tests.

Ensure you grasp the code design, various components, bad smells, refactoring opportunities.

2.

Emphasize software quality and best development practices like refactoring, clean code, domain modeling, evaluations, guardrails and test-driven development (TDD).

3.

In case, you have no practical experience with the used framework please spend time in exploring the basics of it and do let your interviewer know about the same so that the interview can run smoothly.

Interviewing at Thoughtworks

Best practices

Technical & environment

Install Zoom: Download the desktop app early.
Frame: Center yourself in the camera.
Clear tabs: Close confidential windows before screen sharing.

Culture & well-being

Be yourself: Feel free to share your pronouns; we value authenticity.
Take breaks: Need a moment? Just let your interviewer know.
Stay interactive: Ask questions and share thoughts—it's a two-way street.

Code pairing interview & AI

AI assistants are **optional** and do not impact your assessment.
Explain your rationale if you choose to use an AI assistant. Review our [AI Usage Guide](#) before your interview. We prioritize your logic and thought process over the tools you use.

Q&A

There will be approx. 10 mins at the end of the interview to ask us about projects, growth, or the team. Please prepare your questions.

After the interview?

Next steps in your process

The recruiter will contact you with feedback and next steps.

Feel free to ask them how to best prepare for future interviews.
